OBJECTIVE

Motivated and passionate IT student at Anurag University with skills in Python programming and web development. Seeking an internship where I can apply my coding skills, problem-solving abilities, and effective communication to contribute to real-world projects while gaining industry experience.

EDUCATION DETAILS

B.Tech In Information Technology ,Anurag University got 8.87(CGPA) from 2023 to 2027
Intermediate in Narayana Junior College got 92.1% from 2021 to 2023
10th class in Vignan High School got 10.00(CGPA) passed in 2021

CERTIFICATIONS

- Object-Oriented Programming Onramp on Math works got in **1 February 2025**
- learning python on Infosys Spring board got in **17 September 2024**
- Java for beginners on Infosys Spring board got in **24 December 2024**
- Networking basics on Cisco Networking Academy got in **18 November 2024**
- In National level hackathon “Hack attack ” in web development and in domain digital education got in **7 December 2024**

PROJECTS/PBL APPLICATIONS

Project I Grading System

January 7 2025

A grading system is a structured method used to evaluate and assess students' academic performance based on predefined criteria. It provides a standardized approach to measuring knowledge, skills, and competencies, ensuring fairness and consistency in education. Traditional grading systems, such as percentage-based and letter grading (A, B, C, etc.), have been widely used, whereas modern systems incorporate Continuous and Comprehensive Evaluation (CCE) and Credit-Based Grading Systems (CBGS) to assess students holistically.

Digital grading platforms help educators analyze student performance, provide real-time feedback, and reduce manual errors. However, challenges such as subjectivity in assessments, the psychological impact of grades on students, and the need for flexible evaluation methods remain areas of concern. An ideal grading system should balance fairness, transparency, and adaptability to cater to diverse learning needs.

Employee leave management System

An Employee Leave Management System (ELMS) is a digital solution designed to streamline the process of leave requests, approvals, and tracking within an organization. Traditional leave management often involves manual paperwork, leading to inefficiencies, errors, and delays. A well-implemented ELMS automates this process, ensuring transparency, accuracy, and ease of access for both employees and management.

The system typically includes features such as leave application submission, real-time leave balance tracking, automated approvals, leave policy enforcement, and integration with payroll systems. Advanced systems integrate AI and analytics to provide insights into leave patterns, workforce availability, and productivity impacts. Despite its advantages, challenges such as system security, customization to organizational policies, and user adaptability must be addressed.

SKILL SET

- c programming,python programming,java programming,php programming
- HTML,CSS
- Data Base Management System on MySql
- Software Engineering, computer organization, Formal Languages and Automata Theor.

ACHIEVEMENTS

- I got 5 stars for sql , 4 stars c programming and in python programming in hacker rank
- Solved 31 problems in leetcode in python language

HOBBIES/STRENGTHS

- competitive programming on leetcode .
- reading personality development books
- listening to motivational podcasts like tedx and also to some melodies music
- good communication: able to express ideas clearly and work effectively in teams

PERSONAL DETAILS

- Date of Birth: 11 July 2005
- Location : Bhongir, India
- Father's name:Sathyanarayana Dommati
- languages: English, Hindi , Telugu

DECLARATION

I hereby declare that the above-mentioned information is accurate and true to the best of my knowledge and belief.

Date: 2 March 2025

Place: Hyderabad , India
